Medicines uses

Xanax is a medication that is commonly used to treat anxiety disorders, panic disorders, and anxiety caused by depression. It belongs to a class of medications called benzodiazepines, which work by slowing down the nervous system and brain activity, resulting in a calming effect.

How does Xanax work?

Xanax works by enhancing the effects of a neurotransmitter called gamma-aminobutyric acid (GABA) in the brain. GABA helps to reduce the activity of nerve cells, which in turn produces a calming effect on the brain and body. This helps to alleviate symptoms of anxiety and promote relaxation.
